Canon Pixma MP 560 Setup

Download drivers for printer and scanner from Canon Asia site:
http://support-asia.canon-asia.com/P/search?model=PIXMA+MP568&menu=download&filter=0&tagname=ca_os&ca_os=Linux

If using 64 bit Ubuntu you need to do these modifications:

modify install.sh. Add --force-architecture option to the line where "dpkg -iG" is specified as an extra option

To get the scanner working you need to download 32 bit compiled gimp libraries from
http://mirrors.kernel.org/ubuntu/pool/main/g/gimp/libgimp2.0_2.6.7-1ubuntu1_i386.deb

Then you should run
`dpkg -x libgimp2.0_2.6.7-1ubuntu1_i386.deb .`

copy the files in usr/lib into /usr/lib32 (sudo usr/lib/* /usr/lib32)

Run gimp and choose "File | Create | Scangear MP.."
First time you will get an error - push the "update scanner" button and choose the canon scanner.

You can find additional information on the scanner setup in this thread:
<http://www.uluga.ubuntuforums.org/showthread.php?p=8403307>
